DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 & 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Sahyoun, US Patent 5,532,649.

Re Claim 1, Sahyoun discloses a load detection circuit for determining when (1) a loudspeaker load is properly connected at a set of loudspeaker terminals (<u>abstract</u>, <u>col. 7, lines 13-22</u>), (2) a loudspeaker load is improperly connected at the loudspeaker terminals (<u>abstract</u>, <u>col. 7, lines 13-22</u>), and (3) no loudspeaker load is connected at the loudspeaker terminals (<u>abstract</u>, <u>col. 7, lines 13-22</u>).

Re Claim 3, Sahyoun discloses a load detection circuit according to claim 1, wherein the load detection circuit comprises two light emitting diodes packaged in a single housing (*fig. 4a*), and further wherein one of the two light emitting diodes is a green diode and the other one of the two light emitting diodes is a red diode (*abstract; col. 9, lines 9-15*), the load detection circuit being configured to (I) light tie green diode when the loudspeaker load is properly connected at the loudspeaker terminals (*abstract; col. 9, lines 9-15*), (2) light the red diode when the loudspeaker load is improperly connected at the loudspeaker terminals (*abstract; col. 9, lines 9-15*), and (3)

Application/Control Number: 10/743,605

Art Unit: 2615

light both the green diode and the red diode together when there is no loudspeaker load connected at the loudspeaker terminals (<u>abstract; col. 9, lines 9-15</u>).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sahyoun, US Patent 5,532,649 as applied to claim 1 above, and further in view of Kokubo et al, US Patent 5,973,555.

Re Claim 2, Sahyoun discloses a load detection circuit according to claim 1, but fails to disclose wherein the load detection circuit comprises two operational amplifiers. However, Kokubo et al does (<u>fig. 3; abstract</u>).

Taking the combined teachings of Sahyoun and Kokubo et al as a whole, one skilled in the art would have found it obvious to modify the load detection circuit

Application/Control Number: 10/743,605

Art Unit: 2615

according to Sahyoun with disclose wherein the load detection circuit comprises two

operational amplifiers as taught in Kokubo et al (*fig. 3; abstract*) to provide amplifiers

with high gain that can determine the output voltage of any given input

Contact

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to George C. Monikang whose telephone number is 571-

270-1190. The examiner can normally be reached on M-F. alt Fri. Off 7:30am-5:00pm

(est).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Chin Vivian can be reached on 571-272-7848. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have guestions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
